

Inclinometer

An Inclinometer now essential for the modern motor vehicle where accurate angle measurement is becoming more and more important

Additional Information

- An Inclinometer - a digital angle gauge or digital protractor equipped with a built in magnet.
- Perfect for measuring angles on metal surfaces. It is ideal for use as a digital camber/caster gauge when paired with the Gunson 77137 Trakrite Camber Bar
- Ideal for angle measurement for areas such as: suspension setting of camber and caster, setting bumper mounted radar units used in vehicle collision avoidance and parking assist systems
- Also suitable for Citroen/Peugeot variable valve timing setting and checking angle checks for comparison and setting on any flat surface.

Plus level checks on vehicle body alignment equipment during crash repair

- Equivalent to PSA OEM 1376-A

Trakrite Camber Bar

Designed for use with the Gunson 77099 and 77066 with the wheels on and the vehicle sitting on the ground

Additional Information

- The camber bar is fully adjustable for wheels up to 18 inch in diameter and designed to hang on the tyre giving hands free operation.
- Where the vehicle wheel arch is too low for the camber bar to hang on the tyre it can still be used without the top bracket (held in place by hand)
- For car and light commercial use
- Ideal for quick checking of camber, caster and KPI when used with Gunson 77099/77066
- Designed in the UK
