

Brass Drift 200mm x 20mm

Brass drift for knocking out bearings, shafts and gearbox components etc, reducing the risk of damage.

Additional Information

- Size: 200mm long x 20mm diameter.
- Ideal for removing outer bearings rings and driving in shafts without damage.
- Brass material reduces the possibility of damage to steel components.
- A handy addition to any bearing removal and fitting kit. Particularly useful for gearbox work.
