

Compact Self-Adjusting Ferrule Crimp Pliers

Ferrule crimp connectors have grown in popularity over the years, especially when fitting aftermarket electronics to vehicles. Particularly useful for fitting auxiliary power management systems, charge controller, etc. where "WAGO[®]" or screw type connectors are used. Wire ferrules, when used with the correct crimping tool, replace the need for "tinning" the wire ends with solder. The ferrules are crimped on to the end of a bare wire to improve support of the wire and the connection quality. The 4-tooth crimping tool supplied ensures a tidy and very strong crimp. Quicker and easier than tinning the wire end.

Additional Information

- Faster & cleaner to apply than tinned solder ends. Ideal for fitting to screw clamp & "WAGO[®]" style connectors.
- Gives a strong clamp ready wire end which prevents fraying of the wire strands, provides additional strength & is easier to clamp.
- For use with cables sizes: 23AWG - 7AWG (0.25mm² - 10mm²).
- Ideal for use on cars, light & heavy commercial vehicles, camper vans, mobile homes & general electronics.
- Also features Polypropylene (PP) & Thermoplastic rubber (TPR) handles for grip & comfort.
